

## IBM NOC-Inside – IP Inventory Capabilities

NOC Inside is a packaged, automated, IT Infrastructure management service from Network Solution Pvt Ltd (An IBM Company) for managing end to end IT infrastructure. NOC Inside provides automation for IT Monitoring, IT Helpdesk, IT desktop/server inventory and IP traffic analysis.

NOC Inside provides comprehensive agentless IT inventory discovery and reporting for Windows, Linux and Solaris desktops and servers.

### IT Inventory, Software License Compliance and Policy Management Capabilities

- ✓ Solution is easy to deploy and manage. Specifically, it does not require agents to be installed on desktops or servers.
- ✓ On Windows 2000, 2003, XP servers, desktops and laptops – discovers hardware and software inventory
- ✓ On Linux 2.4, Solaris 5.8 and above servers – discovers installed software
- ✓ Distributed and Scalable discovery engine which can run as scheduled or on on-demand.
- ✓ On Windows machines, detailed hardware inventory can be discovered including CPU, BIOS, RAM, motherboard, hard drives, network interface details and more.
- ✓ On Windows machines, detailed software and operating system inventory can be discovered. Software inventory includes details like application name,

- versions, date of install and software vendor name. Operating System name, version and service packs installed can be discovered.
- ✓ On Linux and Solaris machines, software inventory includes details like application name, versions, date of install and software vendor name can be discovered.
  - ✓ Inventory grouping by business and location (4 levels).
  - ✓ Supports Policy based Software License Compliance.
  - ✓ Supports comparison of installed and procured licenses by custom defined groups.
  - ✓ Supports reporting of software installed for software compliance by business groups.
  - ✓ Allows policies to be defined for desktop and server management.
  - ✓ Ability to define policies for a set of hosts or across domains (for Windows systems only. Periodic monitoring of defined policies including event notification / report on breach of policies.
  - ✓ Comprehensive reporting and analytics

## System Requirements
