IBM On Demand Workplace
for consumer packaged goods
Facing unprecedented competitive and budgetary pressures, consumer packaged goods (CPG) companies are working harder than ever to streamline their business and IT environments, contain costs and achieve employee and infrastructural efficiencies. At the same time, forward-looking organizations are preparing for a return to sustained growth by establishing a flexible, scalable framework for e-business success.

Today’s businesses must be both practical and strategic: driven by pragmatism now, yet poised to prosper tomorrow. As a result of this new mandate, CPG entities of all sizes are learning to leverage e-business principles and processes internally to optimize the effectiveness of each employee…and each employee relationship. These business-to-employee (B2E) efforts, while less visible than supplier, partner or customer-facing activities, can help companies put their own houses in order, first and foremost.

The IBM On Demand Workplace offering provides a unique and comprehensive portfolio of software, hardware and services geared toward the creation of B2E portals, intranets and enterprisewide knowledge management, as well as employee self-service and collaboration.

The core of the IBM offering is the portal—a single, unified point of access for employees and others seeking to leverage enterprise information, applications, expertise and community resources. The portal-driven approach empowers the workforce and optimizes the use of human and IT assets—helping in turn to drive a better return on overall investment (ROI). Plus, the portal establishes a fully aligned and efficient framework from which to launch business-to-business (B2B) and business-to-consumer (B2C) initiatives.

IBM On Demand Workplace is a proven solution set of virtually unparalleled breadth and depth—fully adaptable to your current environment and fostered by firsthand experience. IBM has aligned and Web-enabled its own complex environment—an effort which has achieved highly lauded and measurable results. Indeed, IBM is an on demand workplace, tried and true. With our help, your organization can become one, too.

Portals provide a powerful technology for aggregating relevant, personalized content and for providing an intuitive navigational structure for accessing B2E applications and services.

—GIGA

1
The power of the portal
An employee portal is an intranet Web site that serves as a common, unified and simplified point of access to enterprise information, applications and expertise. Implementing a B2E infrastructure around a portal can help your organization:
• Improve customer sales and service
• Drive innovation
• Achieve operational efficiencies
• Motivate and educate the workforce
• Reduce employee turnover
• Streamline human resources
• Prepare for growth
The CPG industry: Aligning a complex value chain

A CPG enterprise is by definition tactically complex, with people and processes extended along a broad value chain and segregated by role and function. CPG processes span marketing and sales; manufacturing; procurement and distribution; research and development; human resources, and IT. The disparate activities of corporate decision makers, factory managers, account representatives, customer associates, procurement teams and logistics planners are all brought to bear on a CPG organization’s ultimate success or failure – but are typically performed in organizational and operational isolation.

As a result, functions are often redundant or contradictory, communications untimely and unreliable, and employees at all levels isolated and hampered by inefficient processes. Establishing an integrated, end-to-end on demand workplace in a CPG environment can rectify this situation by improving the information flow across internal business units, enabling more efficient and cost-effective processes, enriching collaboration, and creating a less complex infrastructure from which to manage all relationships – with employees, suppliers, wholesalers, retailers and end consumers.

An IBM On Demand Workplace solution can furnish CPG executives and professionals with a personalized “dashboard” from which to quickly, securely and nearly effortlessly acquire the specific information they need to conduct transactions. Personnel in every sector of the organization can become “knowledge workers” by leveraging a wide range of Web-enabled access devices – including desktop PCs, conventional and wireless phones, personal digital assistants, and specialized handheld devices – to retrieve reliable, realtime data. In this way, IBM On Demand Workplace serves to minimize time-consuming navigation and process redundancies, while empowering each and every employee to add value to the enterprise.

IBM On Demand Workplace: How much do you need?

IBM On Demand Workplace offers modular and customer-tuned solutions – supported by IBM consultants who are prepared to assess and quickly define what services would most fully benefit your CPG enterprise and provide the most rapid and assured ROI. These offerings include, but are not limited to:

- E-mail and instant messaging
- E-meetings
- Companywide directories
- Self-service human resources (eHR)
- Online libraries, policies and procedures
- Key performance indicators
- Distance learning opportunities
- Online expenses management
- Remote access
- Wireless solutions

Next, IBM can help you develop a strategy and design a customized On Demand Workplace framework with built-in, role-based functionality to support your employees – regardless of level, locale or business unit. IBM consultants will then perform rapid prototyping to support seamless implementation of your chosen solutions on an aggressive timeline.
IBM On Demand Workplace: Connectivity, integration and personalization

IBM On Demand Workplace can provide a holistic, scalable and cost-effective solution tailored to your business needs and designed to function effortlessly within your current IT environment. IBM On Demand Workplace is based on WebSphere® Portal Server—enhanced by best-of-breed search and personalization capabilities, as well as collaboration and workflow solutions from leaders like Lotus® and Microsoft®.

The IBM WebSphere Portal Family is open and standards-based, enabling snap-in connections to a wide variety of enterprise and third-party systems.

“IBM has figured out the e-workplace environment better than anyone else, and has the depth to bring all the pieces together.”

Doreen Wright, senior vice president and CIO, Campbell Soup Company

Inside IBM: Real workplace results

IBM employees consider their global intranet their single most credible and useful source of enterprise information. Nearly 15 million accesses a day can attest to this preference. Quantifiable results include:

- The company’s Blue Pages corporate directory gets more than one million accesses per day, saving IBM approximately US$10 million per year through time efficiencies.
- More than 4,800 e-meetings are conducted within IBM each month, and employees participate in over one million instant message chats via intranet each day.
- Forty percent of IBM training is now done online, saving the company more than US$350 million in 2001 alone.
- Nearly all IBM human resource services have moved to the intranet. Online health and pension services have saved more than US$1 million per year.
of leading applications. Plus, IBM has many existing integrations with popular independent software vendors (ISVs) – allowing for faster workplace deployment and precise alignment with your B2B and B2C systems.

IBM is dedicated to delivering the world’s richest and most comprehensive workplace solution. Toward that end, 300 IBM researchers continue to generate sophisticated technologies for collaboration, pervasive computing, e-learning and knowledge management. At the same time, IBM has developed a proven set of e-workplace assets through its own internal transformation. These customizable solutions – designed to reduce cost, risk and deployment time – include:

- Reusable portlets
- Personalization and profiling solutions
- E-directory templates
- Intranet forum and discussion support
- Wireless device support
- Media Jukebox for audiovisual needs
- Expense reporting solutions

These elements are further fortified by a broad range of capabilities from across IBM Global Services, including:

- Systems integration
- Content management
- Rapid workplace implementation using a workplace framework
- Data and IT hosting
- CPG industry expertise

With IBM, you can have complete confidence in a speedy, successful implementation of a total workplace solution – proven and prepared to grow.

Picture this: More flexibility, less complexity
IBM On Demand Workplace can furnish tailored, role-based “dashboards” and self-service opportunities for associates across a CPG enterprise. This solution can help:

- Executive, manufacturing and logistics teams participate in digital collaboration to support savvy decision-making regarding product introduction, price adjustment and inventory.
- Sales and marketing associates master new product sets through timely and cost-effective distance learning.
- Procurement and distribution managers leverage online portal access to realtime pricing data, inventory levels, buying trends and promotions.
- Field staff gather scheduling, benefits and salary data via intranet- and call center-supported human resource services.
- Logistics and transport teams enjoy anytime, anywhere access to delivery schedules, route workflow and the enterprise directory via wearable, wireless PC.
